

GLW Quality Beef Feeds are carefully formulated, incorporating the latest nutritional knowledge, to maximise the potential of modern rearing and fattening systems.

Beef Feeds

Within the range there is a product to suit all requirements. Whether the need is a high density ration for fast growing cattle, or rations for more extensive systems, each is formulated to provide the optimum balance of nutrients which optimise growth and carcass development.

Gold Calf Weaner Pellets:

For healthy, thriving calves an early intake of the correct balance of nutrients is essential. This highly palatable ration includes a range of top quality proteins to provide the essential amino acids for frame and muscle development.

PowerGro Beef:

Ideally suited to modern production systems with fast growing cattle that demand a high nutrient input. This high energy ration is fortified with quality proteins to maximise growth rates, particularly in the early stages of fattening.

Prime Beef:

This diet has been formulated as a high structural fibre diet, particularly well suited to ad-lib feeding systems. Prime Beef is ideal for the fast, efficient finishing of beef cattle.

Cattle Rearer:

A balanced formulation combining the attributes of traditional quality raw materials and modern nutrition expertise for the less intensive rearing system, or for supplementing grass as its quality declines in late summer and autumn

Bespoke Beef Blends:

We can tailor a specific beef blend to your requirements from a range of high quality raw materials.

As with all our feeds, the Beef Feeds range comes with the “GLW Positive Response Commitment”, including access to experienced technical support, dedicated customer service, raw material, and transport teams, ensuring that you receive what you want, when you need it.

.....Your feeding system for lifetime performance
