

The GLW Range of Duck Feeds are designed for ducks being reared for the table. The diets are designed for good early growth, without pushing too hard to avoid skeletal and intestinal problems.

Duck Feeds

GLW Duck Feeds are manufactured from carefully selected and quality assured raw materials to the highest standards of production methods and traceability to ensure high quality, consistent products. The nutrient content is well balanced to help maximise good gut health, and meet the bird's mineral requirements.

The Starter Pellet is available with or without medication. The Medicated Starter Pellet contains 2kg/tonne Trimediazine, a broad spectrum antibiotic suitable for ducks, giving 50ppm Trimethoprim and 250 ppm Sulphadiazine in the finished feed.

N.B. It is dangerous to feed ducklings on chick or turkey diets as these often contain an anticoccidial which may be harmful to them.

Product	Code	Protein %	ME (MJ/kg)	Medication
Duck Starter Pellet 0 to 12 days*	P72003	21.0	11.9	Plain
Duck Starter Pellet 0 to 12 days* (Medicated)	P72000	21.0	11.9	Trimediazine 2
Duck Grower Pellet 13 – 35 days*	P72001	16.6	12.1	Plain
Duck Finisher Pellet 36 days to kill*	P72002	15.2	12.3	Plain

As with all our feeds, the Duck range comes with the “GLW Positive Response Commitment”, including access to experienced technical support, dedicated customer service, raw material, and transport teams, ensuring that you receive what you want, when you need it.
