

GLW **Emerald** dairy compounds are high density, controlled starch compounds which also supply the by-pass protein required by high yielding cows. **Emerald** dairy cakes are typically fed to herds achieving up to 10,000 litres. The **Emerald** range is available from 16 – 24 % protein.

Emerald Dairy Compounds

A high density true 13 ME dairy compound. Suitable for use with a combination of grass, maize and whole crop silages, or where there is a high acid loading from grass silage. Safe to feed at high levels in the parlour or through OPF systems.

Formulated from the following range of selected high quality raw materials: Sugar Beet Pulp, Maize, Wheat, Barley, Hi-pro Soya Bean Meal, Distillers Grains, Maize Germ Extractions, Rapeseed Meal, Wheatfeed. Molasses, Minerals and Vitamins.

Characteristics	Advantages
High energy density	Maximises the use of home grown forages
High levels of digestible fibre	Helps to maintain high rumen pH required by rumen microbes to stimulate silage intake, therefore achieving good acetate production as the precursor to milk fats
Quality, high energy proteins	Supplies generous levels of by-pass protein to support high yields
Controlled starch levels	Reduces acid loading of the rumen and allows an ideal combination of balanced energy sources to optimise milk fat and protein production
Market leading mineral, trace element and Vitamin package, including the GLW Booster Pack, containing Selplex®, Availa® Zinc and Availa® Copper	Ensures effective immune system response, leading to lower cell counts and reduced lameness, whilst enhancing fertility

As with all our feeds, the Emerald range comes with the “GLW Positive Response Commitment”, including access to experienced technical support, dedicated customer service, raw material, and transport teams, ensuring that you receive what you want, when you need it.

..... Your feeding system for lifetime performance
