

The GLW Range of Gold'n'Lay layer diets has been designed to meet the production requirements of the modern egg laying bird kept in a non-cage environment, such as barn and free range systems.

The Gold'n'Lay range of diets are formulated to optimize egg production at all ages, using a phased feeding programme utilising up to five different layer diets, ensuring the correct nutrient intake throughout lay. This enables the producer to match performance demands and manipulate egg size as required.

Yolk colour is one of the most important factors in the consumer's choice when purchasing eggs. The Gold'n'Lay diets use specially selected ingredients to meet a higher colour standard than is typically found on the high street.

From early lay up to peak production, maintaining body weight is critical. For flocks which are underweight we recommend our 18% protein Super Early Lay diet.

Normally the diets are fed as a coarse mash but are also available as a quality crumble, a fine crumb and a pellet to match feeding systems and modify feed intake where necessary.

Product	Code	Feeding Age	Protein %	ME (MJ/kg)
Gold'n'Lay – Pre Lay Mash	P71020	17 to 5% production	17.5	11.7
Gold'n'Lay – Early Lay Mash	P71030	20 to 34 weeks	17.0	11.7
Gold'n'Lay – Peak Lay Mash	P71040	35 to 45 weeks	16.5	11.5
Gold'n'Lay – Mid Lay Mash	P71050	46 weeks +	16.0	11.2
Gold'n'Lay – Late Lay Mash	P71060	55 weeks +	15.5	11.0

As with all our feeds, the Gold'n'Lay range comes with the "GLW Positive Response Commitment", including access to experienced technical support, dedicated customer service, raw material, and transport teams, ensuring that you receive what you want, when you need it.
