

# GLW Stabilizer

## MORE THAN JUST A RUMEN BUFFER!

**GLW Stabilizer is an unequalled blend of effective buffers. This unique blend provides phased and multi-function buffering:**

- **A high pH, quick release buffer for neutralising the rumen**
- **A buffer to regulate “body” pH**
- **A slow release, high surface area buffer to stabilise rumen pH over long time periods.**

**Adding Stabilizer to diets containing low pH silage or high levels of rapidly fermentable feed such as cereal grain, maize or whole crop forages gives the following benefits:**

- Neutralizes rumen acids whilst helping to maintain a stable rumen pH better than conventional buffers
- Maximises feed intakes
- Cost effective
- Promotes efficient milk production
- Helps maintain milk quality
- Low inclusion rate, saves diet space and handling
- Reduces, or prevents symptoms of acidosis and related digestive disorders in dairy cows
- Increases microbial activity
- Complements the animals natural endogenous system for buffering excessive acid, leading to a more stable and productive rumen environment.

**Feeding Rate:**

**180 grams per cow per day for the first 7 days  
120 grams per cow per day after this**

GLW Stabilizer is packed in 25kg bags and can be stored for up to 6 months in cool, dry conditions

**As with all our feeds, GLW Stabilizer comes with the “GLW Positive Response Commitment”, including access to experienced technical support, dedicated customer service, raw material, and transport teams, ensuring that you receive what you want, when you need it.**

*.....Your feeding system for lifetime performance*
